Freezing the world

1

Making a shadow print

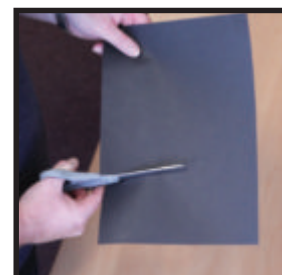

Equipment

- A5 piece of photographic paper
- Tray with developer
- Tray with stop bath
- Tray with fixer
- Tray with water
- Plastic forceps
- Stop clock
- Black card
- Disposable gloves
- Safety glasses

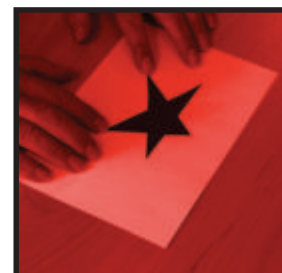

Instructions

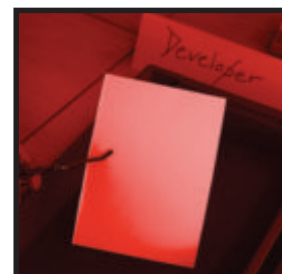

1 Use the black card to make a design to go in the middle of a piece of A5 white paper.

2 Your teacher will now turn the lights out and switch on the safety light. Your teacher will give you a piece of photographic paper. Place the paper face up on the table in front of you. Put your design in the middle of the photographic paper.

3 Your teacher will now turn the light on for 30 seconds and then switch it off. When your teacher has switched off the light pick up the photographic paper with the plastic forceps. Slide it into the developer in the developer tray.

4 When you can see a sharp image of the design immediately pick it up with the forceps at the corner of the paper and slide it into the stop bath for 30 seconds.

Making a shadow print

Instructions continued

5 Carefully pick it up again and slide it into the fixer. Leave it in the fixer for 5 minutes.

6 Rinse the fixer off in the water tray and put the photographic print onto a paper towel to dry. Put your disposable gloves in the bin and wash your hands.

- 1 What can you see on the photographic paper?
- 2 Why do they call it a shadow print?
- 3 Stick your shadow print into your exercise book.
